

REFACTORING & TESTS

guided notes

REFACTORING & TESTING

You need to write a test that checks that the response of a get request to 'index' renders the 'index' template. Fill in the missing bits of code:

```
# Describe what you are testing (this is called "passing in the describe
block")

describe "_____ "

  # Now what do you EXPECT to happen? Tell the test what it is
  # expected to do.

  it "_____ " do

    # Time to actually DO the thing, in this case
    # submit a get request to the index controller action

    _____ :index

    # Now write your expectation!
    expect(_____.to _____ (:_____))

  end
end
```

What things should you test in your app? List four pieces of functionality that come to mind and could be tested:

- 1.
- 2.
- 3.
- 4.
