

INSTALLING YOUR PINNING APP

guided notes

INSTALLING YOUR PINNING APP

What is the very first thing you need to do with the Github repository we have provided with the pinning app in it? *Hint: it sounds like a kitchen utensil!*

Why are you doing this instead of cloning it straight up?

Where can the templates for your pins be found? Fill in the filepath:

pinning-app > app > > > *my templates! (not the actual folder name)*

In order to install the app, what do you need to do? Write down as many you can think of:

- Set up your database.yml file
-
-
-
-
