

RAILS SCAFFOLDS & FOLDER STRUCTURE

guided notes

RAILS SCAFFOLDS & FOLDER STRUCTURE

What feature of Rails allows you to accomplish a week's worth of work with only a few keystrokes?

When you generate a scaffold you write a command that looks something like this:

```
rails generate scaffold People first_name:string birthdate:date
```

In this instance, what do "string" and "birthdate" do?

In what folder can you find your environments.rb file?

What goes in the log folder? Why are those useful?

What is different about the public folder in Sinatra and Rails? Where does all that stuff go in Rails?

What three files do Sinatra & Rails have in common?

1. Gemfile
- 2.
- 3.

In Sinatra you write your URL paths and controller actions in your controller files. What TWO files do you use in Rails to accomplish the same thing?

- 1.
- 2.
