INTRO TO RAILS

guided notes

INTRO TO RAILS

Rails is a what, just like RSPEC, Sinatra, and Nokogiri?

To install Rails you need to run the following command. Fill in the blanks:

```
rails
```

When you create a new rails app, you run this command:

```
rails new first-app -d postgres
```

Circle the name of your app.

Then underline the part of this command that is NOT required.

Once your run your app, using the command `rails server`, where do you go to see it?

http://localhost:_____
